

THE RECOVERY TEAM

Our staff of therapists possess more than 150 years of combined experience managing individualized care for patients. By focusing on capability rather than disability, this team is committed to putting our patients on the road to recovery and keeping them as active as possible at any age.

OUR PROGRAM

Ennis Regional Medical Center's Rehabilitation Clinic is available for those who experience aches, pains, surgery recovery, debilitating illness, trauma, stroke, joint replacement, fractures, back/neck problems, developmental disabilities, amputations, wounds and more.

These conditions do not have to mean a lifetime of dependence on others. Working together we can **See Your Potential... Set Your Goals... Reach Your Goals!**

INDIVIDUALIZED NEEDS

Our occupational and physical therapists work with your individual needs to help you achieve your personalized goals. With direct one-on-one attention you'll find healing and rebuilding to fit your needs:

- Care for geriatric, adult, adolescents and pediatric patients
- Evidence-based therapy approach to address individual goals
- Programs to improve balance and coordination and to address general weakness
- Postural awareness and core stability
- Featuring low level laser, electrical stim, soft tissue and manual therapy techniques, "game ready" cold compression therapy.
- Cervical and lumbar mechanical traction

SPECIALIZED CARE

Physical Therapy treatment plans address **orthopedic conditions** such as joint replacement, fractures, osteoarthritis, low back pain, TMJ and chronic repetitive injuries.

Occupational Therapy and **Physical Therapy** treatment plans address **neurological conditions** for adults and pediatric patients including stroke, traumatic brain injuries, radiculopathy, cerebral palsy, developmental disorders, torticollis and carpal tunnel symptoms.

Occupational Therapy treatment plans address conditions such as hand, elbow and shoulder dysfunction and/or disabilities including stroke, acute trauma, fractures, amputations, inflammation or dislocations and other chronic repetitive injuries, coordination problems and weakness. Pediatric specialties include cerebral palsy and learning disabilities.
